

SMP MACS ST SYSTEM

- Easy installation, no PC required for setup or troubleshooting.
- Graphic touchscreen with user friendly interface.
- Advanced troubleshooting that provides the driver with problem solving information.
- Screen which clearly displays the bucket angle for example.
- A smooth and agile control with high precision.
- MACS system communicates with the machine's control system.
- Individual user profiles.
- Tracks and wheel steering are optional extras.
- Delivered with the popular L8 joystick.

With MACS ST you can control the tiltrotator's functions. The functions and steering are controlled with joysticks equipped with stepless rollers. The rollers on the handles make it possible to control the functions proportionally, so the speed increases the more you roll them. The MACS system allows you to operate your tiltrotator more smoothly and with increased flexibility which provides great precision. With the touch screen, the driver can easily get feedback from the system via a user-friendly interface. The MACS system has several different user profiles that can be programmed to suit different drivers and their choice of tools. The tiltrotator is connected to the excavator's single acting auxiliary hydraulics.

- Joystick
